Lisa - Good to meet with you this afternoon. Thank you for your help locating the wells and loaning PWT the key to the wells. I checked the AOC language and I believe that it provides EPA and the State with their contractors access to property located within the Site. The section of the AOC is: Section XII, paragraphs 60-62 on page 22. If the City views this interpretation differently, please feel free to contact either myself or Richard Sisk. Richard's phone # is 303-312-6638.

Thanks.

Good afternoon, Paula. I will out of the office until we meet on Thursday. If you need to reach me, I will still be getting email at the beginning and end of the day, or you can call me on my cell phone at 303 495 9495. Thanks, and I look forward to meeting you on Thursday.

Lisa

Most definitely. Any time will work for me...I don't have anything on my calendar.

Lisa - I think it would be helpful if you could meet us on-site on Thursday, March 8th so that we could decide on a location for the drum storage at that time. Would you be able to meet us then? We can do either morning or afternoon.

Thank you, Paula. I appreciate your consideration. I will be on-site with you for both the development and sampling of at least the wells on Denver property. We will not take splits at this time and I will find you a place to store your drums until the analytical results are back. Please keep me posted as to times and if anything changes.

Lisa

Lisa - I said I would let you know our schedule. Here is our tentative schedule. We have tried to work around your schedule limitations as much as possible but we are hoping that you can also work with us.

Thursday, March 8 - Meet at the site to walk around and determine where the drums could be stored - this would include both the POs for MW5 & 6 as well as the wells on City of Denver property. We are trying to coordinate with Denver - their person has a crazy schedule in March and isn't available many days.

Week of March 12th - Development of the wells starting M and depending on how development went, they should be finished by W but it could possibly go to Th.

Week of March 19th - Because the wells need to sit for a week, they would start sampling on Tuesday, March 20th and should finish by Friday or sooner.

This schedule depends on the weather of course and on how quickly the wells recover after development and how quickly they stabilize from purging when sampling. If necessary they would have to extend their time into the last week of March.

Also, I sent you an e:mail last week with a couple of questions and haven't heard from you yet on those. They are as follows:

1. Did the City want to be on-site when we developed the wells or just for the sampling? Will the City want to take splits?

2. Also, I haven't yet been to the site but would there be some place on the City of Denver property that we could store the IDW (mainly 55 gal. drums of purge/development water) in a secure location until we get sample results back? We would probably want to store the IDW from MW-5 & MW-6 with the IDW from the wells on the City property.

I would estimate that we would get results back in ~ 3.5 weeks and then the contractor will need ~ a few days to validate the data before determining an appropriate disposal facility.

Please contact me ASAP if you have any questions or concerns. We will of course need to get keys to the wells from you.
